

Travis C. Priest

Principal Embedded Systems Engineer

Embedded Systems • Electrical Engineering • PCB Design • Product Architecture • Technical Consulting

Email: travis@tcp-eng.com | Phone: (239) 443-0370

Career Highlights

- 20+ years designing embedded systems from concept through production.
- Expertise in Embedded C/C++, electrical engineering, PCB design, and hardware/firmware integration.
- Founder of TCP Engineering providing embedded systems consulting.
- Experience across HVAC, industrial controls, marine, automotive, IoT, and power electronics.
- Strong background in board bring-up, validation, manufacturing support, and product architecture.

Professional Summary

Principal Embedded Systems Engineer with extensive experience developing commercial embedded products. Experienced in firmware architecture, embedded software, electrical design, PCB development, system integration, manufacturing support, and technical leadership.

Core Technical Skills

Category	Skills
Languages	Embedded C, C++, Python
Embedded	ARM, Embedded Linux, FreeRTOS, ESP32
Protocols	UART, SPI, I ² C, CAN, Ethernet, USB, Modbus
Hardware	PCB Design, Board Bring-Up, Analog/Digital Design
Tools	Altium Designer, KiCad, Git, VS Code

Professional Experience

TCP Engineering — Independent Electrical & Firmware Engineer

Nov 2019 – Present

- Founded engineering consultancy focused on embedded systems, PCB design, and firmware.
- Architect embedded products from concept through production.
- Perform design reviews, EMI/EMC troubleshooting, board bring-up, validation, and manufacturing support.

Drako Motors — Senior Embedded Systems Engineer

2024 – 2026

- Supported embedded electronics for high-performance EV platforms.
- Worked across validation, integration, and hardware/firmware collaboration.

SailPlan — Embedded Systems Engineer

2022 – 2024

- Designed embedded hardware for marine monitoring systems.
- Developed PoE-enabled electronics and supported validation.

Globe Tracker — Senior Firmware Engineer

2020 – 2022

- Developed ARM firmware, Embedded Linux communications, USB networking, and automated validation tools.

AJ's Power Source — Senior Electrical Design Engineer

2017 – 2019

- Designed UPS and battery charging electronics.
- Supported manufacturing and automated test systems.

Ultra-Tech Enterprises — Senior Electrical & Embedded Systems Engineer

2008 – 2017

- Designed embedded hardware, PCB layouts, HVAC controls, power electronics, and supported products through production.

Dawning Technologies — Hardware Engineering Manager

2003 – 2008

- Led hardware engineering, product development, and cross-functional engineering efforts.

Education

Bachelor of Science, Electrical Engineering

Alfred University — May 2003

Professional Development

Dale Carnegie Leadership Training — April 2011 to June 2011
